

Software Requirement Readiness Levels (SrRL)

Rathachai Chawuthai
Computer Engineering, KMITL

Your software is ready for users! Are you sure?

- Some Bugs ?
- Slow response ?
- Errors ?
- Users say OK?

Have all requirements
been **tested** already?

Introduction

This paper introduces software requirement readiness levels (SrRL), which is a definition to determine the readiness level of each software requirement of a software system. Our proposed SrRL provides the **definitions of 9 levels** that are applied from the **concept** of technology readiness levels (TRL), together with **scenarios** and **recommendations** to achieve each level.

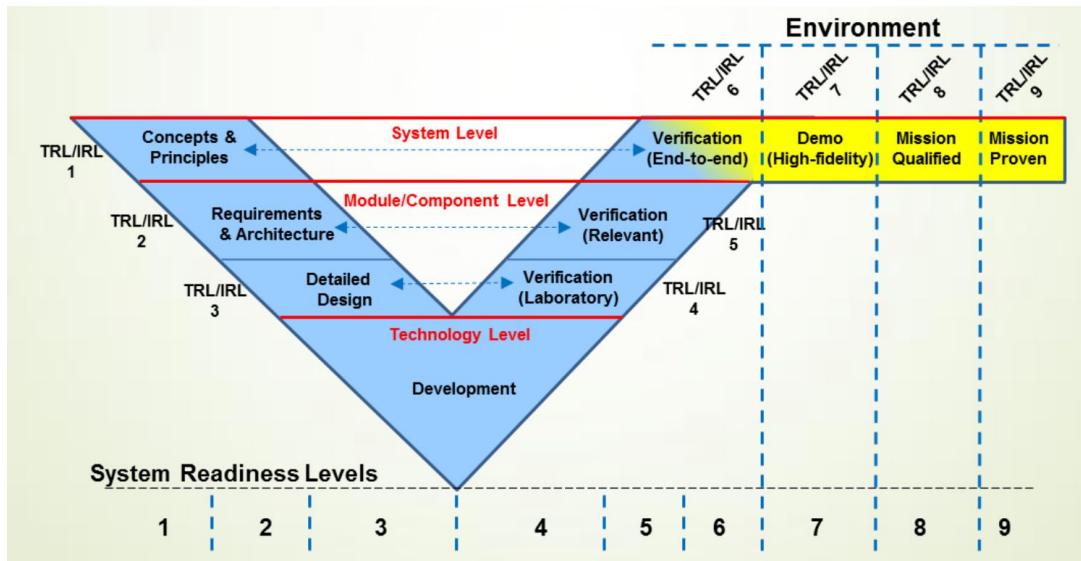

The proposed concept, SrRL, can be a **guideline** for inspection committees, stakeholders, product owner, development team, etc. **to accept software systems** that satisfy their requirements.

Agenda

- Background
- **SrRL**
- Guidelines
- Examples
- Summary

Background

Technology Readiness Levels (TRL)

- 1) Concept & Principle
- 2) Requirement & Architecture
- 3) Detailed Design

- 4) Verification (Laboratory)
- 5) Verification (Relevant)
- 6) Verification (End-to-End)

- 7) Demo (High Fidelity)

- 8) Mission Qualified
- 9) Mission Proven

Software Requirement Readiness Levels (SrRL)

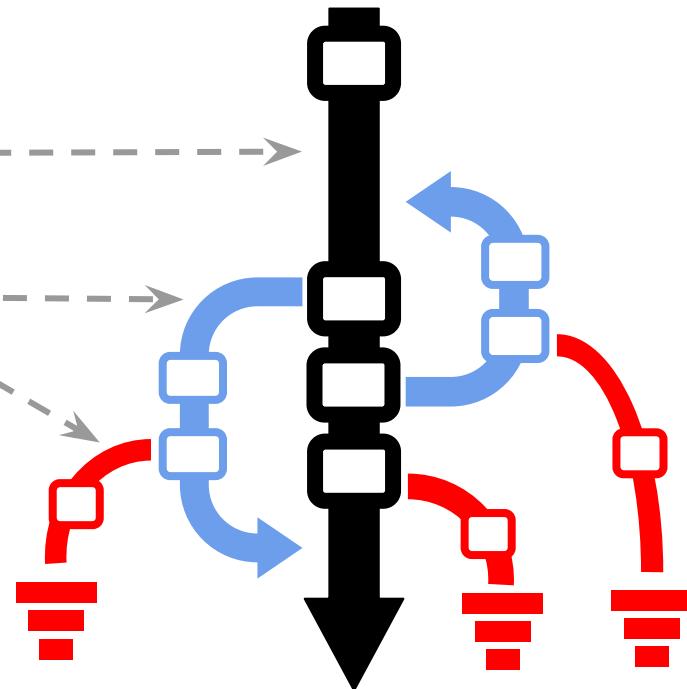

Software Requirement Item

can be each of ...

- Feature/Function
- Use Case
- User Story
- Task

Flows in each Requirement Item

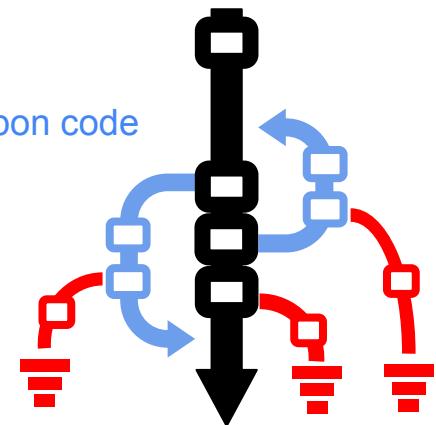

- **Key Flow(s)** ----->
- **Alternative Flows**
 - **Regular Variance** ----->
 - **Exceptional Flow (Error)** ----->

Example: Requirement Item: Buy Online Products

All Flows include:

- **Key Flow(s)**
 - select products → add to a cart → check out a cart → select a payment method
→ pay → get confirm msg
- **Alternative Flows**
 - **Regular Variance**
 - select products → add to a cart → **login** → check out a cart
→ select a payment method → pay → get a confirm message
 - select products → add to a cart → check out a cart → **add a coupon code**
→ select a payment method → pay → get a confirm message
 - **Exceptional Flow (Error)**
 - products are not available immediately during payment
 - payment fail
 - user makes a cancellation
 - user closes a browser by accident during payment
 - internet connect problem found during payment
 - a coupon code is invalid

Software Requirement Readiness Levels (1-3)

Level	TRL	SrRL Activities
1	Concept & Principle	<ul style="list-style-type: none">• Key flows are analyzed
2	Requirement & Architecture	<ul style="list-style-type: none">• Detailed requirement Analysis of all possible flows• Acceptance criteria• Context diagram (between a developing system and external systems)
3	Detailed Design	<ul style="list-style-type: none">• UX/UI (Mockup Prototype)• System Modelling e.g. UML, DFD, ERD, etc.

Design is Ready for Development

Software Requirement Readiness Levels (4-6)

Level	TRL	SrRL Activities
4	Verification (Laboratory)	<ul style="list-style-type: none">• Key flows are unit tested• Key flows are integration tested in a development environment.
5	Verification (Relevant)	<ul style="list-style-type: none">• Key flows are integration tested and system tested in a test environment.
6	Verification (End-to-End)	<ul style="list-style-type: none">• Key flows are system tested, end-to-end tested, and user acceptance tested in a pre-production environment with real cases, real data, and real external systems

Key Flows are Ready for Demonstration to Stakeholders

Software Requirement Readiness Levels (7)

Level	TRL	SrRL Activities
7	Demo (High Fidelity)	<ul style="list-style-type: none">• All flows are unit tested.• All flows are integration tested, and system tested, and end-to-end tested in a pre-production environment with real cases, real data, and real external systems.• In other words, all flows are passed levels 4, 5, and 6.

The Requirement is Ready for Pilot Users

Software Requirement Readiness Levels (8-9)

Level	TRL	SrRL Activities
8	Mission Qualified	<ul style="list-style-type: none">• Every flow are non-functional tested in a pre-production environment.<ul style="list-style-type: none">◦ e.g. performance, availability, security, etc.• Some standards are verified (if any).
9	Mission Proven	<ul style="list-style-type: none">• All flows are installed in a production environment using an automatic process.

The Requirement is Ready for Delivery to Customers

bit.ly/SRRL

SrRL: Guidelines

Priority of Software Requirement Items

- **Critical** (Required)
 - Requirements that have a high value to the goal,
 - e.g. checkout a shopping cart, auction, decision-making reports ...
- **Standard** (Mandatory)
 - Requirements that support the critical requirements,
 - e.g. sign up, login, logout, forgot password, support reports, ...
- **Optional** (Nice to Have)
 - Requirements that have a low impact to the goal,
 - e.g. user profile avatar, about us page, nice-to-have reports ...

An Example Software System (18 req items)

Critical Requirements

- [R01] Browsing Products, [R02] Adding to Cart, [R03] Managing Cart, [R04] Checkout Process, [R05] Order Tracking, [R06] Recommended Products

Standard Requirements

- [R07] Register, [R08] Login, [R09] Logout, [R10] Change Password, [R11] Edit Profile, [R12] Purchase History

Optional Requirements

- [R13] Add 3D Avatar, [R14] Chat with other buyers, [R15] Mini Game, [R16] Browsing History, [R17] CEO message, [R18] About Us

Summary

Summary

- **A Requirement Item**
 - Can be: a Function, a Feature, a Use Case, a User Story, a Task, a Sub Task, ...
 - A Requirement Item contains
 - All Flows = Key Flow(s) + Alternative Flows
- **SrRL: 9 Levels**
 - After Level **3**: Design is Ready for Development
 - After Level **6**: Key Flows are Ready for Demonstration to Stakeholders
 - After Level **7**: The Requirement is Ready for Pilot Users
 - After Level **9**: The Requirement is Ready for Delivery to Customers
- **Priority of Requirement Items**
 - Critical, Standard, Optional
- **Next Steps**
 - Adjust the SrRL concept with Government and Software Industries
